

ABSTRACT OF THE DISCLOSURE

An attachable breast form enhancement system comprising a  
5       pair of breast forms adjoined by a connector. The breast  
forms have an interior surface with a pressure sensitive  
adhesive layer that adjoins to the user's breasts. The  
pressure sensitive adhesive layer can be a permanently grown  
10      pressure sensitive adhesive that has an adhesion force to the  
breast forms that is greater than a cohesion force to the  
user's breasts. The connector adjoins the separated breast  
forms by attaching to the inner sides of the breast forms and  
pulling the user's breasts together. The connector can be  
either permanently or removably attached to the breast forms.  
15      Several different configurations of breast forms and  
connectors are available to achieve the benefits of the  
present breast form system. The improved breast form system  
allows a user to eliminate use of traditional bras by simply  
adhering the pair of breast forms to the user's breasts/skin,  
20      and then adjoining the breast forms with the connector. The  
breast form system provides for enhancement of breast size and  
shape, as well as provides for customization of breast  
cleavage and push-up enhancement.
